

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

Those of the present school may look upon **v** as composed of 'e. Look upon **el**, **vel**, **bef**, as the same things with 'el, v'el, b'ef, and read eel, veal, beef.

The number of letters is 35, but the number of types required for the printing of them is only 24, because

Any and all printers are in possession of the materials required for Phrenotypic Printing.

On the top of the second column is the phrase "represents the initial sound of the word;" this will indicate to every unsophisticated common-sense man, with *sufficient*, although perhaps not perfect clearness and exactness, the sound he has to produce at the sight of any of the above symbols; and a few minutes' oral instruction is all that is required for *perfection*.

To convey an idea of these sounds by the usual divisions, sub-divisions, sub-sub and sub-sub-sub-divisions into vowels, consonants, semi-vowels, consonanto-vowels, consonanto-muto-semi-vowels, &c. &c.—with the "exact" and "philosophical" epithets—long, short, hard, soft, hissing, buzzing, softo-hard, parvo-soft, very long, &c.—with the additional comfort of a minute description of the tendencies, movements, and ultimate conformations, of the numberless nerves,

muscles, membranes, veins, cartilages, glands, &c., of the organs of speech—appears to me as arduous a task as that of conveying an idea of the taste of Cayenne or vinegar by a minute description of the movements of the muscles of the face, tongue, salival glands, &c. produced by Cayenne or vinegar. All such divisions and descriptions are certainly useful in many respects; but to the child, the illiterate Englishman, or the foreigner, they are inextricable puzzles—in surmountable stumbling-blocks. Let therefore the student simply rivet his eyes upon each of the above symbols, and at the same time imitate the respective sounds produced by his teacher; until he can do so without his assistance.

The names of our letters are not the usual ones—ay, bee, see, dee, eff, aitch, &c.; the names of our letters are nothing but

the sounds produced by the organs of speech whilst attempting to pronounce the above corresponding words, and stopping at the first movement.

I ask little Edward how he calls this—pointing to the instrument with which I am scribbling these lines—and he sounds *pen*. The sounded word, *pen*, is the name of this visible object; and so will, to him, the name of each visible letter be the sound which he has been accustomed to hear and pronounce at the sight of that visible letter.

ch is to be looked upon as *one* symbol, and not as composed of *two*; at the sight of this *one* symbol we produce *one* sound, which sound is the name of it. The printer will certainly have to form it by putting together *two* types—and so has the watchmaker to put a whole myriad of objects together for the purpose of producing the visible

thing which we agree upon to call by the *one* short name watch: we do not call it wheelo-glasso-indexo-springo-chaino, &c. &c. This would appear absurd; and we do, for convenience sake, agree to call it simply watch; and so we will, for convenience sake, agree to call ch, not cee aitch, but by the sound that reaches our acoustic nerve synchronously with the rays of light reflected by ch reaching our retina. The same is to be understood with regard to sh, th, ph.

I am well aware that it would be better to have a new *one* symbol for each of them, but this would create too much trouble at once to those of the old school; they would not condescend to allow such concessions, and, therefore, it would jeopardize the whole; when, with the above precaution on the part of the teacher, the trouble is scarcely per-

ceptible to the new generation; such *new* perfect *symbols*, without the necessity, however, of *new* types, you may see in the annexed alphabet for better times, p. 39.

Make the student rivet his eyes upon *ch*, *sh*, *th*, *rh*, and produce the respective *one*, *nothing but one*, and *always the same one* sound, and you will have freed him of the old absurdities at the rate of 99 per cent., with scarcely any inconvenience to the capricious old despots—embarked interest, old habit, public opinion.

THE CONSONANTS.

Z	S	A
t ʈ ɹ d	n	m
r	l	j ɟ ɿ ʝ
k g h	f v w	p b
K	X	A

This Alphabet differs from that proposed at present—thus :

‡ stands for th

‡ ‡h

‡ ch

‡ sh

‡ ks

‡ gz

‡ iu

This Alphabet is nearer perfection than that of 1844, because it is more in accordance with precepts 3, 4, 5, 6; and can equally be printed with the types at present in existence, as the above ‡, ‡, ‡, ‡, ‡, ‡, are the inverted types t, r, j, f, k, m. But it would give too much trouble at once to those of the old school; and therefore would be impracticable under the present circumstances.

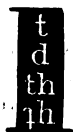

Here is the Lord's Prayer, written in this Alphabet.

Ɔr fŁter, whif Łrt in hevn, hŁlœd bœ ȳ
nam : ȳ kingdũm kũm : ȳ wil bœ dũn in
erŁ Łz it iz in hevn ; giv ȳs ȳis da Ɔr dale
bred : And fœrgiv ȳs Ɔr trespæsez Łz wœ forgiv
ȳem ȳŁt trespæŁ agenst ȳs : And lœd ȳs not
intu temtashon : bȳt dœliver ȳs from evl : fœr
ȳyn iz ȳe kingdũm, ȳe pœer, and ȳe glœrœ, fœr
ever and ever. amen.

[This is, in itself, decidedly better than what I propose at present, but it is not so easily legible as that of page 286. Phrenotypers will easily guess, from the tabular arrangement, the numerical powers of these letters.—*See Handbook of Phrenotypics.*]

NUMBERS.

THE Arabic figures 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, we shall represent by consonants according to the following diagrams

This means we represent

- 0 by s or z
- 1 — t, d, th, or th
- 2 — n
- 3 — m
- 4 — r
- 5 — l
- 6 — h, ch, sh, j or l
- 7 — k or g
- 8 — f, v or w
- 9 — p or b

Any given word may be translated into numbers, thus: the word *man* contains the consonants *m n*, and is therefore 32,

name	beer	paper	polite
n m	b r	p p r	p l t
2 3	9 4	9 9 4	9 5 1

Still, in the present absurd orthography, there are many difficulties in the way of those who wish to progress rapidly in their Phrenotypic Studies of Numbers. These difficulties are easily obviated by means of the Anti-absurd Dictionary.

For instance, in the present orthography, and in accordance with the rules laid down in the "Handbook" one might be puzzled to know whether the word *knowledge* represents 728516 or 2516, or perhaps

Those of my pupils who could not afford studying the mystifications of English diphthongs, *g* soft or hard, *k* and *e* mutes, &c., and also those independent spirits who had the courage to treat these scribbling-masters' mystifications with due contempt—have hitherto been perplexed in many a department of human knowledge where numbers are concerned, and in some of them they could not progress at all; for instance in *music*. The panacea against this orthographic plague is the Anti-Absurd Dictionary: here you find every word clearly representing numbers. In this Dictionary you find the word *knowledge* spelt anti-absurdly *nolej*, which evidently contains *n l j*

2 5 6

I advise, therefore, all those who wish to progress in the study of numbers by steam and rail, to exercise themselves upon the pages of the Dictionary in a manner similar to the following:—

This will enable them to translate rapidly any given word into numbers, and also to manufacture easily words for given numbers. The importance of this acquirement can easily be appreciated by every one who has witnessed the wonders of Phrenotypics.
